

Toe jacks & Load skates

Dynamic Rigging Hire have toe jacks and load skates for hire designed for the positioning of plant and equipment. Our range of machinery moving gear is easy to use, very durable and capable of loads up to 54 tonne.

Toe jacks are a variation on a standard bottle jack that allows the load to be lifted on the low height lip, the jacks have enough stroke or lifting height to raise the load for skates to be positioned underneath.

Our load rollers feature nylon wheel sets that are non marking to floors and require very little effort to move the load.

We also stock steel tracked caterpillar skates for applications nylon wheels aren't suitable for.

Some important things to consider

Load skates must only be used on flat level ground

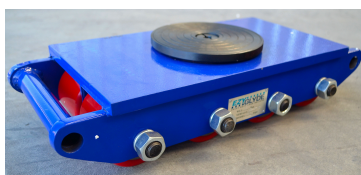

Load skates work better on three points of contact than four

Know the weight of what you're moving

Ground surfaces must be clean and smooth

If any doubt call a professional company in to conduct the works

Load skate/roller Type	Load cap per skate	Load cap in set of 3 or 4	Height
Metal track	7,500kg	22,500kg	65mm
Nylon wheel on 360° castors	4,000kg	8,000kg	112mm
Nylon wheel	6,000kg	18,000kg	112mm
Nylon wheel	12,000kg	36,000kg	112mm
Nylon wheel	18,000kg	54,000kg	112mm
