

Toku 1t winch

Our Toku HUL air winch is a small compact unit rated for pulling and utilises an air driven motor making this ideal for confined spaces, underground or mining applications. It is important to point out that this model winch is not rated for lifting materials or persons.

We can offer longer lengths of winch wire but this will reduce the line pull ratings and the line speed, discuss your needs with our office on (03) 8360 8910

- **110m of 12m 6x36 wire rope fitted with thimble eye**
- **1,133kg top layer line pull**
- **Single external band brake**
