DYNAMIC RIGGING HIRE

Australia's best range of quality heavy rigging gear

Lifeboat test kit

Unique **SEAFLEX**

A Unique Maritime Group Company

Dynamic Rigging Hire have available for hire complete systems of equipment to conduct SOLAS load testing to lifeboats and gangways. Dynamic Rigging Hire understand the maritime industry and can look after the logistics of getting the equipment to your port, all equipment is packed into a sturdy lifetable case.

The kit comprises of 19 x 375kg water test bags (sufficient to test an 80 man lifeboat), a flow metre, a 6 way manifold, 6 colour codes delivery/suction hoses, hard suction hose, lay flat discharge hose and a pneumatic double diaphragm pump. Measurement is recorded by a calibrated analogue flow metre.

Additional number of lifeboat bags are available upon request and we also hold a customer made set of hoses to allow two hoses off each manifold outlet so 12 bags can be connected simultaneously.

Most importantly the nature of the lifeboat load test equipment allows the technicians to only need to enter the lifeboat to position and remove the bags, the pre-connected discharge lines ensure no persons are inside the boat when at maximum load. The lifeboat test kit is also well suited for gangway load testing.

We can deliver the lifeboat systems to any port on the Australian eastern seaboard and collect from another port where cruise ships for example have testing over a series of days in different ports, for the larger cruise ship lifeboats we can supply water load bags with calibrated load cells for davit arm and winch testing.
